How is Russia doing in the research community. Focus on international collaboration

Scholarly output (Article, Review, Conference Paper)

Of BRICS countries China is leading with highest scholarly output per year. Scholarly output for Russia increased year by year to around 80 thousand documents per year.

International collaboration

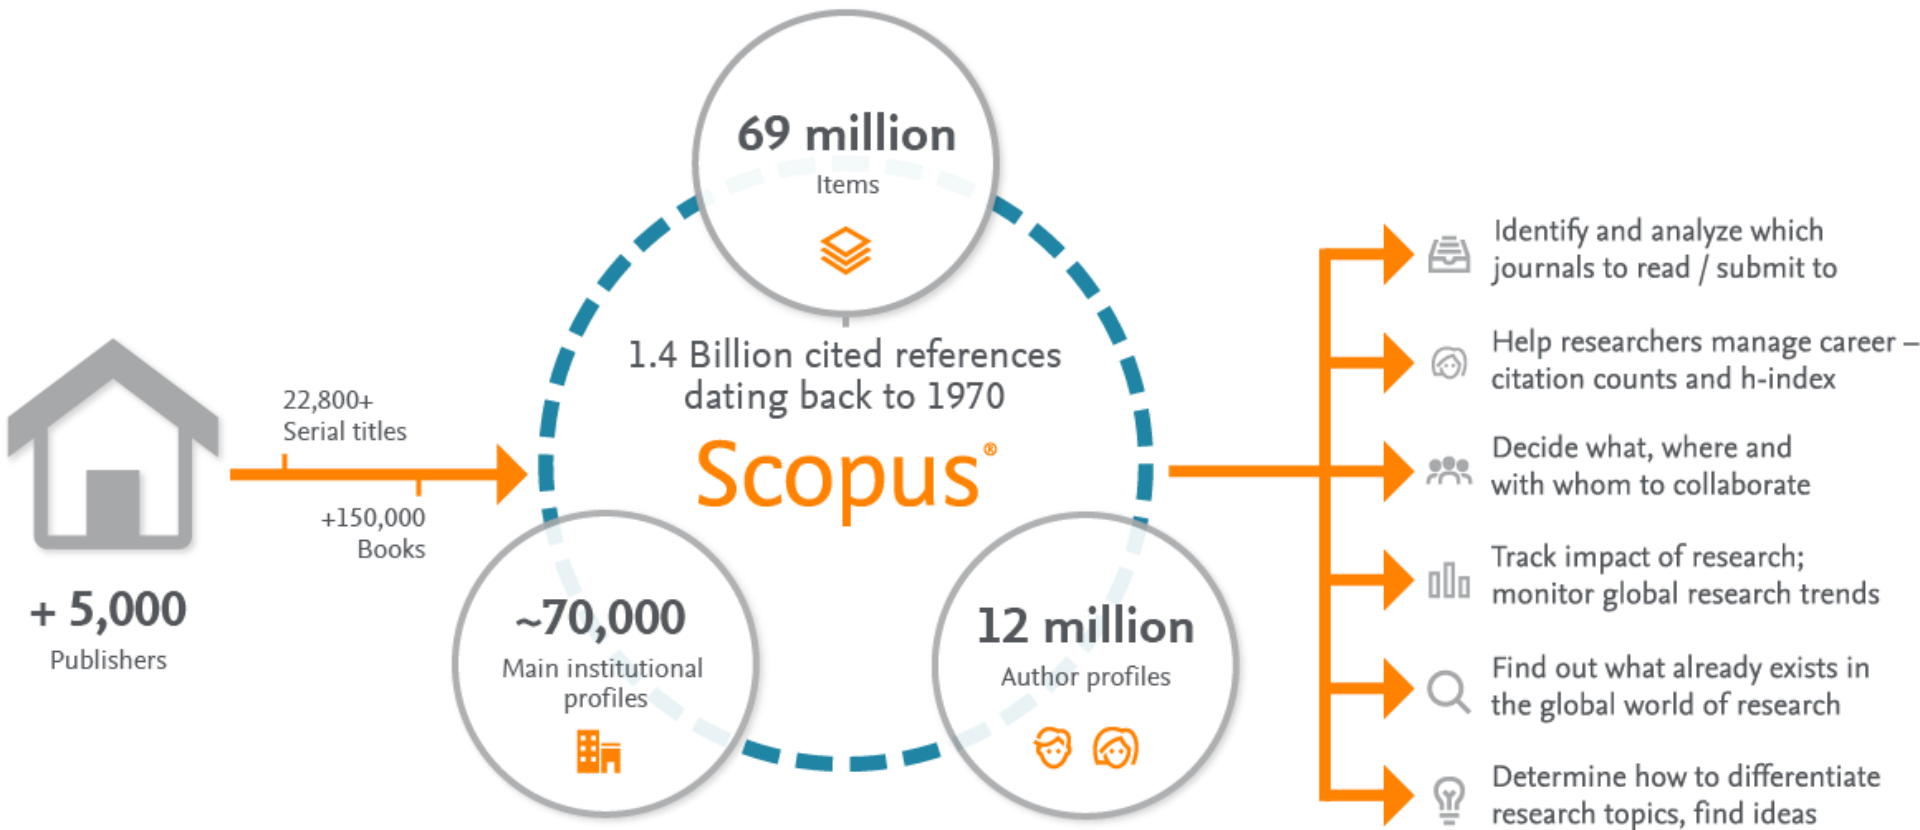

With a collaboration rate of >30%, Russia has the second largest international collaboration rate of all BRICS countries in 2007. However while others have a stable or increasing collaboration rate, Russia's collaboration rate has now dropped to under 25%.

International collaboration leads to increase of Field Weighted Citation Impact (2014 – 2017)

Collaboration FWCI	Country	FWCI	Co-authored publications
6.80	South Africa	1.26	1,122
5.28	Brazil	0.89	2,055
5.04	India	0.78	2,082
3.46	China	0.93	4,399
2.51	USA	1.44	12,567

What we do to ensure that Scopus content is of the best quality standard: content selection policy

Coverage of high quality journals due to selection by the independent Content Selection & Advisory Board (CSAB)

The CSAB is an independent board of subject experts from all over the world. Board members are chosen for their expertise in specific subject areas; many have (journal) Editor experience.

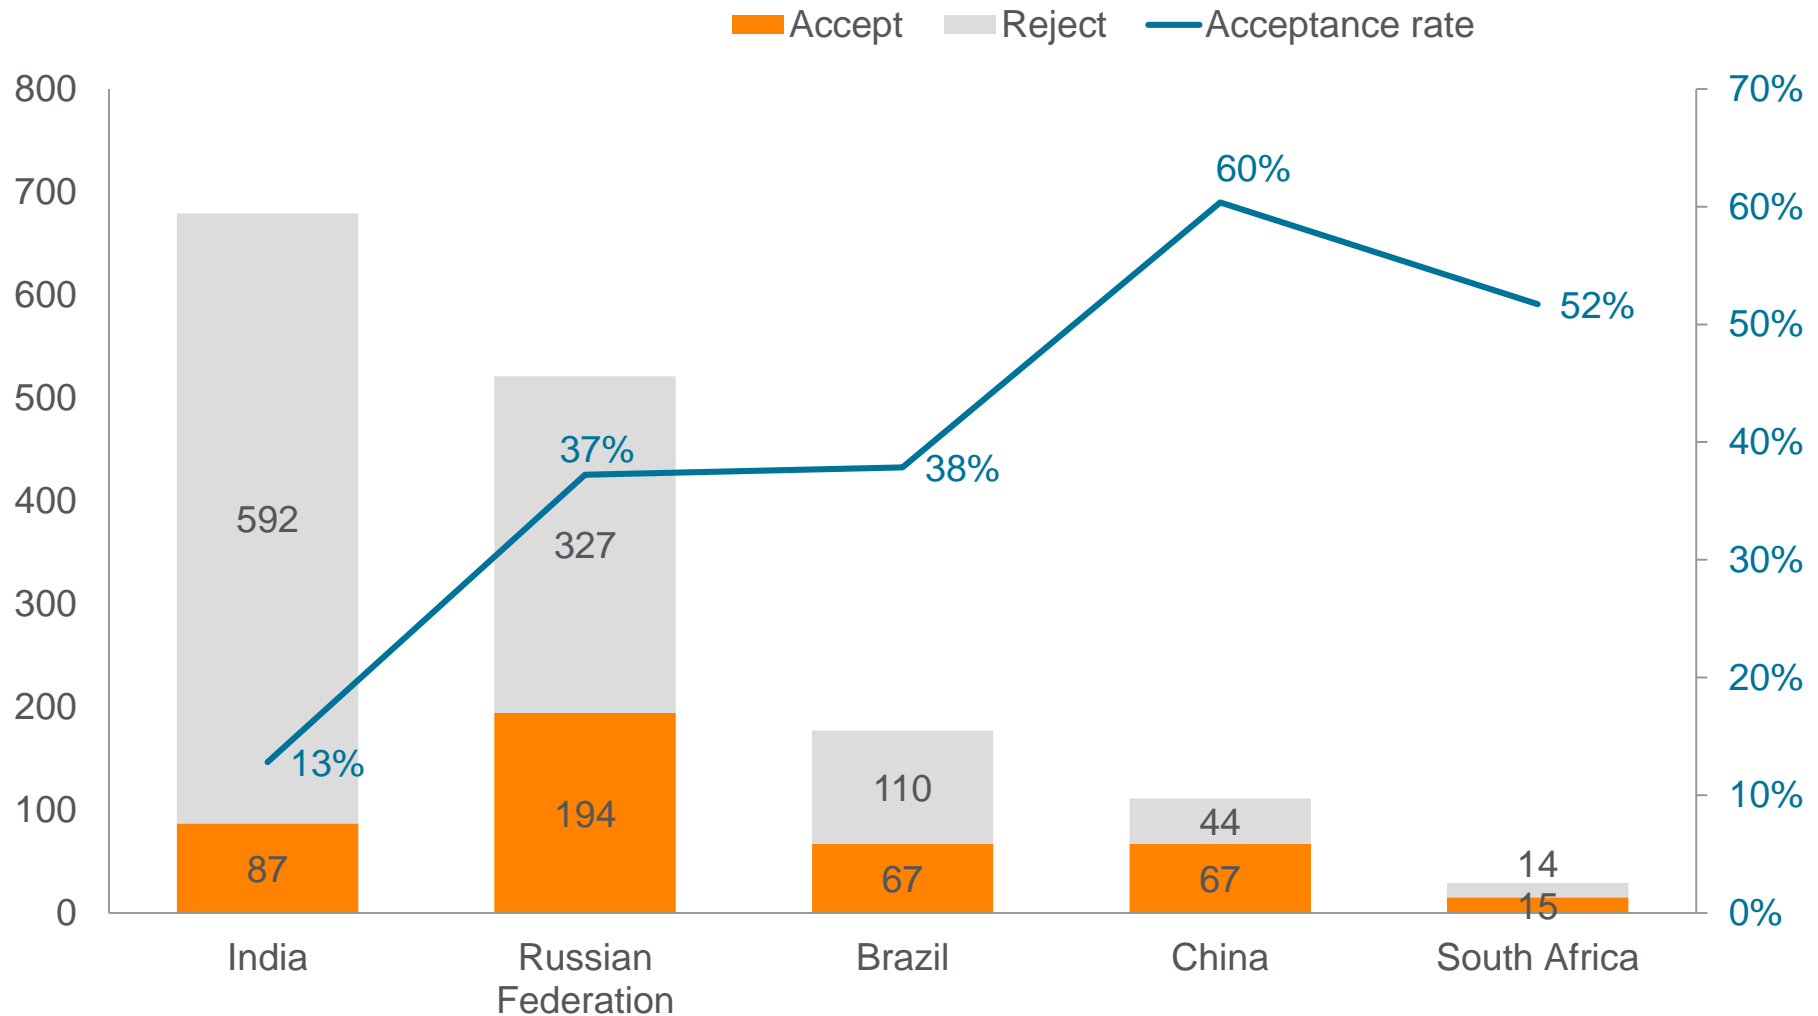

About half of the reviewed titles are selected for Scopus coverage

In total 7,196 titles reviewed (2011 –2018 YTD) of which 3,537 (49%) accepted
Title review results from top 20 countries with most titles reviewed:

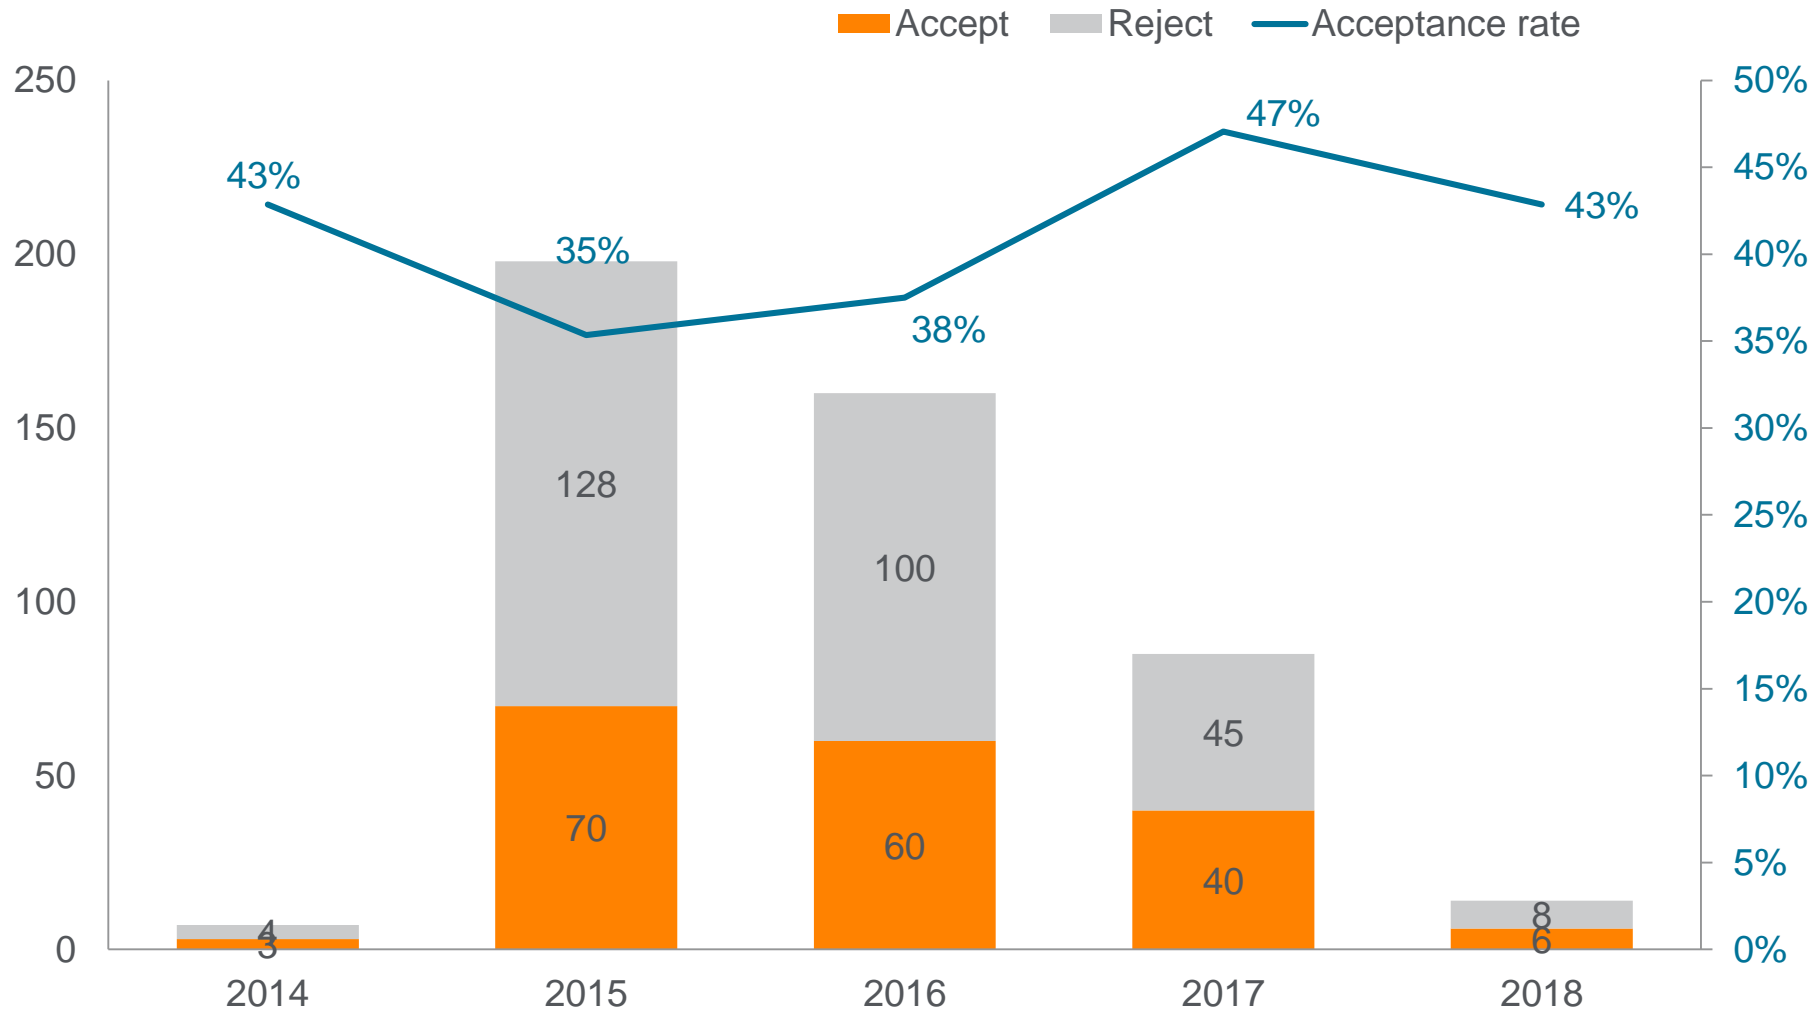

Local Content Coverage

Number of titles reviewed and acceptance rate for BRICS countries (2011 – 2018 YTD)

Number of titles reviewed and acceptance rate for Russian titles 2014 – 2018 YTD

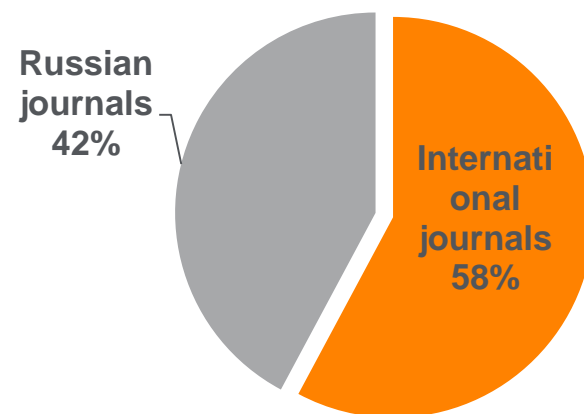

Breadth of coverage Russia (journals)

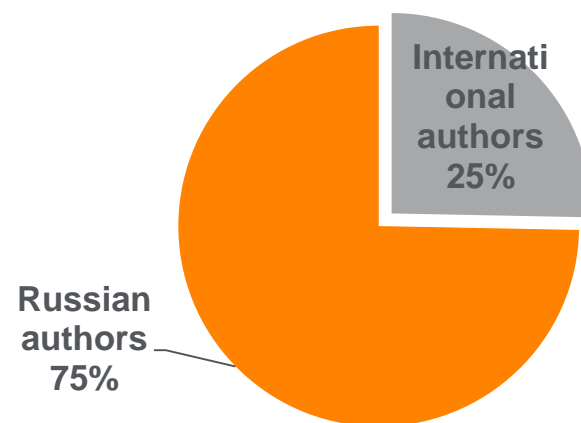

Russian journals in Scopus:

Where do Russian researchers publish (2013 – 2017)

Author distribution in Russian journals (2013 – 2017)

What we do to ensure Scopus content continues to be trustable: Ongoing data quality and content curation initiatives

Structural approach: Ongoing content curation to ensure continuous high quality content

Curation of the full journal base is essential and expected by our customers and users.

Direct feedback from users and stakeholders on poor performing journals

Identification of poor performing journals using metrics and benchmarks

“Radar” to predict journals with outlier performance

Review:

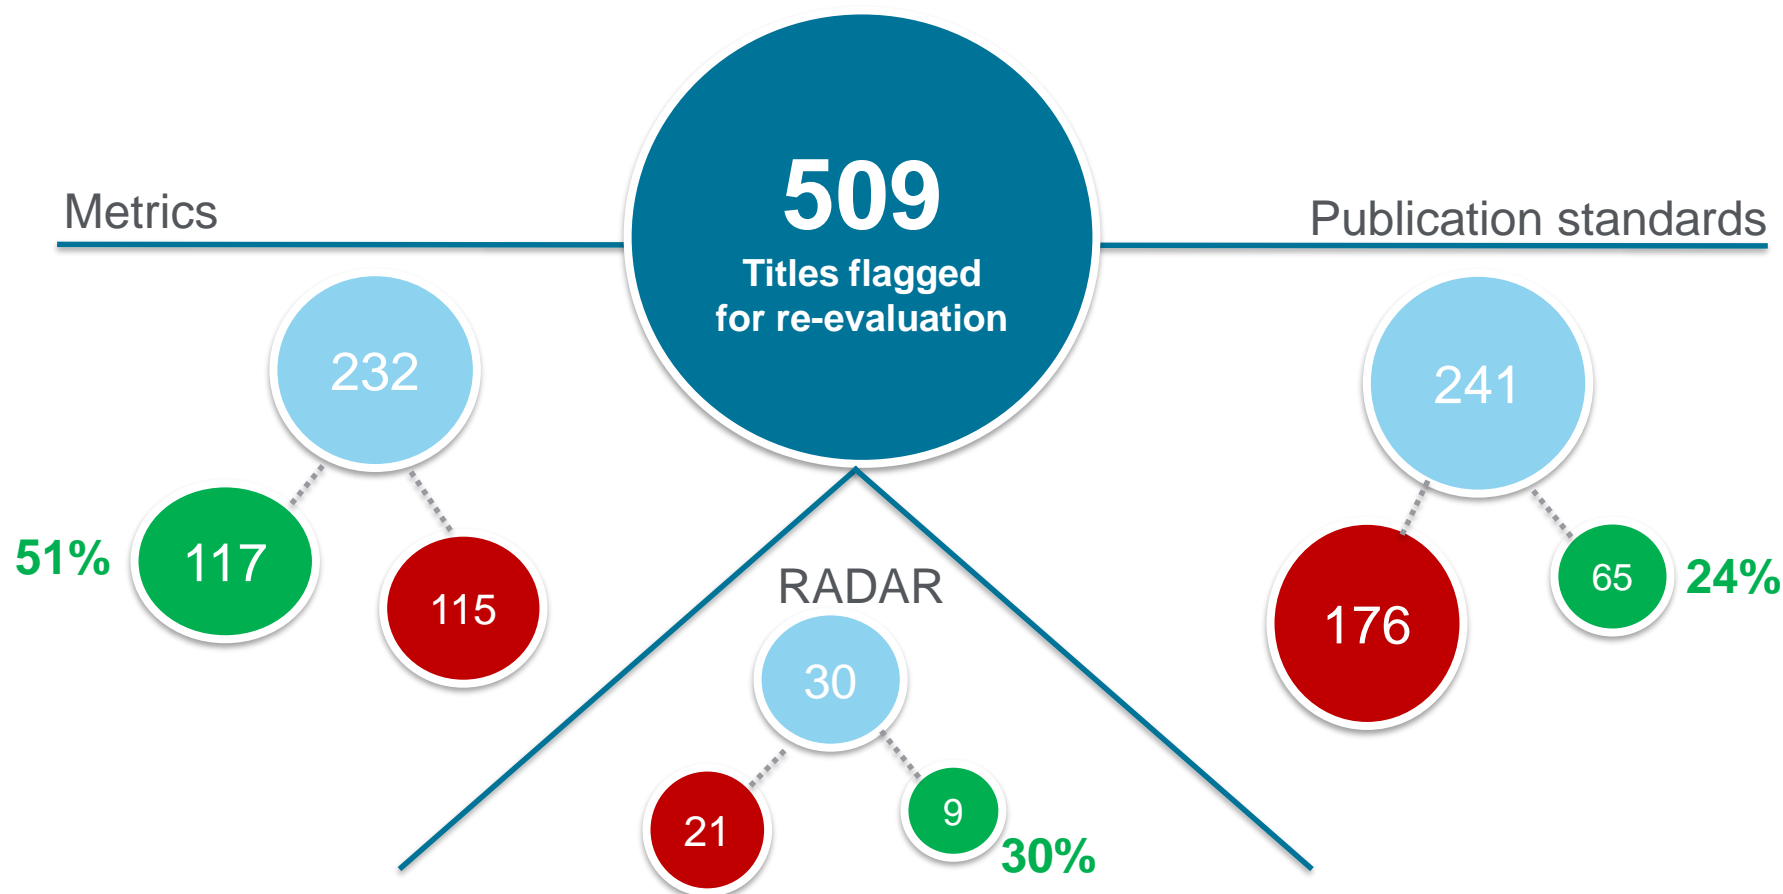

Re-evaluation by the Content Selection & Advisory Board (CSAB)

Curate:

Content Curation

Scopus

Re-evaluation results (2016/2017)

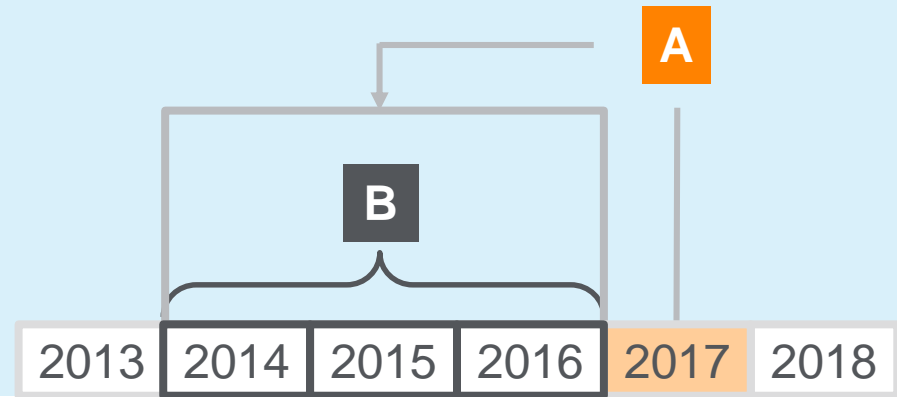

Out of **509** titles flagged for re-evaluation, **312** (=61%) were discontinued from Scopus. To keep track of which titles have been discontinued, check **Scopus Discontinued Sources list** (± 300 titles total) at www.elsevier.com/scopus/content

Research metrics

CiteScore is a simple metric for all Scopus serial titles

Example shows CiteScore calculated for 2017

$$\text{CiteScore 2017 value} = \frac{\text{A}}{\text{B}}$$

CiteScore

A = citations to 3 years of documents

B = all documents indexed in Scopus, same as A

CiteScore is one of a family of related metrics

Abstract

[View references \(25\)](#)

Objective: to identify the use of social networking in nursing education. Method: integrative literature review in the databases: LILACS, IBECs, Cochrane, BDENF, SciELO, CINAHL, Scopus, PubMed, CAPES Periodicals Portal and Web of Science, using the descriptors: social networking and nursing education and the keywords: social networking sites and nursing education, carried out in April 2015. Results: of the 489 articles found, only 14 met the inclusion and exclusion criteria. Most studies were published after 2013 (57%), originating from the United States and United Kingdom (77.8%). It was observed the use of social networking among nursing students, postgraduate students, mentors and nurses, in undergraduate programmes, hybrid education (blended-learning) and in interprofessional education. The social networking sites used in the teaching and learning process were Facebook (42.8%), Ning (28.5%), Twitter (21.4%) and MySpace (7.1%), by means of audios, videos, quizzes, animations, forums, guidance, support, discussions and research group. Conclusion: few experiences of the use of social networking in nursing education were found and their contributions show the numerous benefits and difficulties faced, providing resources for the improvement and revaluation of their use in the teaching and learning process. © 2016 Revista Latino-Americana de Enfermagem.
